To drag canvas around of pasteboard/workspace/preview panel, hold space bar then drag. Or just select hand tool by 'h'.

Zooming system is same as photoshop. Zoom tool: 'z'. Press and holding "alt" will reverse the current zooming operation. By default, animated zoom will be appear. But if we turn off GPU from Preferences Performance GPU checkbox, then the zoom tool will create a rectangle to zoom than it will appear it on the full screen(Just only selected rectangle). I prefer animated zoom. Just click-hold left mouse button and move mouse right or left in order to zoom in and zoom out.
